Credential rotation

Acceptance worksheet | Bruce L. Hernandez

Use an isolated lab, a disposable identity, and harmless jobs. Define expected results before testing. Record credential IDs only; never enter passwords, keys, or token values.

01 Define the exercise

System / environment: _____ Identity / role: _____

Operator: _____ Date + time zone: _____

Old credential ID: _____ Replacement ID: _____

Overlap owner: _____ Retirement time + zone: _____

Dependent jobs / inventory reference: _____

02 Test the promised end state

Each row: record observed result, time + zone, and evidence reference.

Replacement credential

Expected: intended harmless job completes with the replacement.

Observed / time / evidence: _____

Retired credential

Expected: a fresh authenticated request with the retired credential is denied.

Observed / time / evidence: _____

Dependent jobs

Expected: each inventoried test job runs using the replacement credential.

Observed / time / evidence: _____

Existing sessions / tokens

Define expected lifetime and revocation behavior separately; then test it.

Observed / time / evidence: _____

03 Make the decision and handoff

Decision (circle): PASS / FAIL / INCOMPLETE Reviewer: _____

Untested items / limitations: _____

Required action / owner / due date: _____

Pass only when all required checks meet the written expectations. Keep failures and untested items visible. Attach the job inventory and additional evidence pages as needed.
